New to SBIR? Check out this great infographic on the NIH SBIR/STTR website and visit the NIH Guide on grants and contracts to find additional opportunities. NCI SBIR Development Center also publishes an electronic post containing ads on financing opportunities and vital information about policies and procedures. Subscribe to electronic publications to be informed. Useful Resources Grants Opportunities Contracts NIH RePORter Is Your Innovative Technology? Is it original? Has a similar project already been funded? To find out, visit NIH RePORT and search for the Project RePORter database. For help navigating the database, see our guide. Important change to the expiration dates of the SBIR & scholarship STTR The National Institutes of Health are changing their standard due dates for SBIR & SBIR; STTR, in an effort to meet the needs of the small business community, the mandates of Congress and the recommendations of the Scientific Management Review Board (SMRB). Standard due dates from 5 September, 5 January and 5 April. This modification, together with other internal changes, will shorten the response time for applicants for SBIR/STTR scholarships on the status of their applications, and allow the team to make recommendations and funding awards earlier. This will help to improve the applicant experience and drive innovative research technology to the market more quickly and efficiently. This change affects all ads for SBIR and STTR (FOAs) financing opportunities using standard due dates. Research topics of greater interest NCI SBIR & STTR Portfolio Areas are listed in the financing opportunities section. New late filing policy The late application policy has been updated and reviewed. Review NOT-OD-15-039 for more information, for example, reasons why late requests can be accepted. This late filing policy will be effective for all applications submitted from 25 January 2015. Learn how the new NIH Referral Policy affects SBIR and STTR applications Before April 16, 2014, the NIH allowed a referral (A1) of an unfunded application. The extension of the NIH grant number could follow the pattern (A0, A1). A presentation for the first time is informally known as A0, and the first referral is known as A1. Any virtual A2 would be marked by the NIH Center for Scientific Review. For all the expiry dates of the application from 16 April 2014, after an unsuccessful referral request (A1), applicants can submit the same idea as a new application (A0) for the next expiry date of the new appropriate application. Forwarding (A1) must be within 37 months of the new application (A0). For more information about the Referral Policy, please visit the NCI SBIR Re-Commissions website. Come and meet us for more information! For information about upcoming events, visit our events' page. There are many opportunities throughout the year to attend outreach events held by our program managers. TechRadar has support of its audience. When you through links on our site, we can win an automated commission. Learn more TechRadar newsletter Sign up for breaking news, reviews, opinion, analysis and more, in addition to the hottest tech deals. Thank you for signing up for TechRadar! You will receive a verification email and we will no longer be communicating in this forum. Referral pattern and the new late filing policy never share your data with us or partners. The NIH Referral Policy affects SBIR and STTR applications for the 1-Cohort 3,2020 session must be received by January 21, 2020, at 5 p.m. local time. If you have a problem or question during the application process, use these application help resources. Application Guide SF424 SBIR/STTR A complete guide on how to submit NIH SF424 grant application packages. ASSIST Online Help Information on the use of the ASSIST shipping portal eRA Service Desk For questions about ASSIST, eRA Commons registration, submission and monitoring of an application, documenting system problems that threaten filing before the due date, and post-filing problems. Application support (preferred contact method) Phone: 301-402-7469 or 866-504-9952 (no tolls) We encourage you to request it through ASSIST. If you still prefer to request it through Grants.gov: Grants.gov Useful Customer Service for questions about registration and Grants.gov delivery, and downloading forms and request packages. Email: Support@grants.gov phone number: 800-518-4726 GrantsInfo Useful for questions about the instructions and processes of the application, and find NIH grant resources. Email: GrantsInfo@nih.gov (preferred contact method) Phone: 301-945-7573 If you have any additional questions, please contact the program manager at your NIH/CDC adjuvication institute, or email us. The pages in this section provide detailed information on the following types of applications: Investigational New Drug (IND) Current federal law requires that a drug be the subject of an approved marketing application before it is transported or distributed across state lines. Because a sponsor will probably want to send the drug clinical researchers in many states must seek an exemption from this legal requirement. The IND is the means through which the sponsor technically obtains this exemption from the FDA. newer drug application (NDA) When the sponsor of a new drug believes that there is sufficient evidence on the and the efficacy has been obtained to meet the FDA's requirements for marketing approval, the sponsor presents to the FDA a new drug application (NDA). The application must contain data from specific technical points of view for review, including chemistry, pharmacology, medical, biopharmaceutical and statistics. If the NDA is approved, the product can be marketed in the United States. For internal monitoring purposes, all NDA is assigned an NDA number. more Abbreviation New Drug Application (ANDA) An application of new abbreviated drugs (ANDA) contains data that, when presented to the FDA's Drug Evaluation and Research Center, Office of Generic Medicines, provides the final review and approval of a generic drug product. Generic drug applications are called abbreviated because they are generally not required to include preclinical (animal) and clinical (human) data to establish safety and efficacy. On the other hand, a generic applicant must scientifically prove that their product is bioequivalent (i.e. it works in the same way as the innovative drug). Once approved, an applicant can manufacture and market the generic drug product to provide a safe, effective and low-cost alternative to the American public. more Over-the-Counter Drugs (OTC) Over-the-counter (OTC) play an increasingly vital role in America's health care system. OTC drug products are those medicines that are available to consumers without a prescription. There are more than 80 therapeutic categories of OTC drugs, range from acne drug products to weight control drug products. As with prescription drugs, CDER oversees OTC drugs to make sure they are properly labeled and that their benefits outweigh their risks. more Application of Biological License (BLA) Biological Products are approved for marketing in accordance with the provisions of the Law of the Public Health Service (PHS). The Act requires a company that manufactures a biology for sale in interstate commerce to have a license for the product. A biology license application is a presentation that contains information on manufacturing processes, chemistry, pharmacology, clinical pharmacology and the medical effects of the biological product. If the information provided meets THE FDA's requirements, the app is approved and a license is issued that allows the company to market the product. more Related Links Important Addresses for Regulatory Presentations The common application, which is also more informally known as the common application, is an advanced university application that is used to help prospective university students apply to various institutions at the same time. Although it is not in all accredited institutions through this unique online application, you can request a large number of undergraduate programs worldwide. If you are about to apply to university and would like to find the most efficient way to improve your ability to be accepted to more than one school, here is your common application guide. Where can it be applied? The app is more than just an online app, it is a tool that can be used to help solidify a student's chances of entering school without spending all their free time filling multiple applications. In order to use this universal application to your advantage, you must be willing to attend a member university or university. There are currently more than 600 member schools that accept the request from the United States and 14 other countries that include Canada, Austria, France, Germany, Italy, Korea and China. Simply fill out your application and select the schools you want your application to be submitted from the list. Please note that each school's application process will vary, including fees and deadlines. This is something you should pay attention to as schools are added. How to create an account to start your application? One of the great things about the common application is that you can start the process as soon as possible by creating your account. This is a step that doesn't require preparation, but will help you set up your profile so you can start receiving email alerts and updates. Once you provide basic profile information, you can add schools to the list and navigate the specific requirements so you know what to expect. Once added, you can see how a requirement for applying schools varies from the next one. You can even set up a requirement tracker so you're willing to submit everything the admissions board wants to see. What you will have to submit There may be specific requirements of the university, but there are also universal requirements that you must meet before you can submit your application for admission anywhere. These requirements include: high school records, a list of extracurricular activities, entrance exam test scores, trial dates and legal guardian information. Other features that you can use. You can do more than prepare your application and follow-up times through the online college planning app. You can also use the app as a trusted partner in the admission process using a virtual counselor tool. It will give you the guidance you need and the advice you want when you are choosing a university, applying for help, or even selecting a major. Applying to attend college can be stressful. You want to attend a school with the right culture and activities that will keep you engaged, but applying to various schools can be a long time. Check the member schools of the common application and see if the schools you want to attend are listed.
